PROFESSIONAL SUMMARY

Computer Science undergraduate specializing in AI and ML with experience in product management, full-stack development and open-source contribution. Currently a Product Manager Intern at Tribore AI translating business needs into product requirements and implementation-ready workflows. Hands-on experience building applications with React, Next.js, Python, FastAPI and databases, alongside contributions to Apache and Microsoft repositories. Combines technical problem-solving with product thinking to understand user needs and turn them into practical software solutions.

EDUCATION

Year	Degree/Exam	Institute	CGPA/Marks
2024-2028	Bachelor of Engineering (AI & ML)	Newton School of Technology Pune	8.0/10.0
2022-2023	Intermediate (Class XII)	Jamuna Mishra Academy Pilani Rajasthan	8.0/10.0

EXPERIENCE

Open Source Contributor September 2025 - Present
Apache *Remote*

- Authored 197 public pull requests with 104 merged, including 42 across Apache projects and 2 across Microsoft projects.
- Added database lock timeouts and regression tests to prevent Apache Airflow DAG processor hangs. PR #68118
- Added executable-name-based process attachment support to Microsoft's VS Code C/C++ extension. PR #14108
- Fixed long debugger argument truncation in Microsoft MIEngine by increasing the pipe write buffer to 64 KB. PR #1529

INTERNSHIPS

Product Manager Intern May 2026 - Present
Tribore AI *Remote*

- Defined AI-agent workflow requirements for 3 fintech use cases: credit risk assessment, underwriting, and monitoring automation.
- Mapped product flows into implementation-ready API/UI requirements while collaborating around React, Node.js/Express, MongoDB, and backend constraints.

PROJECTS

Porsche Premium Car Experience (Github) (Demo) January 2026

- Built and deployed a responsive car showcase and service-booking platform with animated transitions and interactive vehicle exploration.
- Designed Supabase/PostgreSQL data flows for vehicle records, user requests, and inventory-style content management.
- Implemented reusable components and mobile-first layouts for polished cross-device product UX.

Wine Quality Predictor (Github) (Demo) January 2026

- Built a deployed full-stack ML app using a Random Forest model to predict wine quality from 11 physicochemical feature inputs.
- Implemented a FastAPI REST prediction service and React/Vite frontend for inputs, model outputs, and visual feedback.
- Containerized the system with Docker across preprocessing, model serving, frontend integration, and deployment.

Property Valuation Agentic Advisor (Github) (Demo) November 2025

- Built a property valuation application using Random Forest regression to estimate housing prices from 10 property features, with input validation and outlier warnings.
- Integrated TF-IDF retrieval and comparable-sales matching to generate grounded, rule-based investment summaries without external AI APIs.
- Delivered an interactive Streamlit interface with model evaluation metrics, feature importance, and downloadable PDF reports covering valuations and comparable sales.

CERTIFICATIONS

AI For Everyone Coursera (Link) February 2025

- Gained foundational understanding of artificial intelligence, machine learning concepts, and how AI can be applied to solve real-world business problems.
- Developed insight into AI strategy, ethical considerations, societal impact, and responsible AI deployment.

Generative AI for Everyone Coursera (Link) January 2025

- Gained practical understanding of generative AI fundamentals, how generative models work, and effective use of AI tools and prompt engineering for real-world tasks.
- Learned to evaluate generative AI opportunities, project lifecycle thinking, and insights into business impact, risks, and responsible AI use.

SKILLS

- **CSS, HTML, JavaScript, Python, SQL, TypeScript,Node Js,Mongo DB,Express js:** Apache Airflow, API testing, AWS, Excel

EXTRA-CURRICULAR ACTIVITIES

- Active open-source contributor with meaningful engagements in high-impact projects like Apache Sedona and Microsoft ecosystem tools, driving real improvements.
- Skilled in GitHub workflows, issue triage, code review, and mentoring, helping streamline contributions and onboard new collaborators.
- Known for delivering clean, well-documented code, resolving bugs, and proposing performance optimizations in community-driven repositories.
- Strong analytical thinker with a passion for mathematics and problem solving, applying algorithmic insights to technical challenges.
